Executive Summary

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Site:** <https://m-electricllc.com> (M Electric, LLC — electrician, Tulsa, OK)

Business type detected: Local Service-Area Business (SAB), 25-year electrician, family-owned, Army-veteran-owned, WordPress + Yoast SEO, programmatic city × service architecture **Pages declared in sitemaps:** 389 (34 in [page-sitemap.xml](#) , 355 in [service_page-sitemap.xml](#))

SEO Health Score: 34 / 100 — POOR

Category	Weight	Score	Weighted
Technical SEO	22%	22	4.8
Content Quality	23%	34	7.8
On-Page SEO	20%	50	10.0
Schema / Structured Data	10%	16	1.6
Performance (CWV)	10%	48	4.8
AI Search Readiness (GEO)	10%	18	1.8
Images	5%	65	3.3
Total	100%	—	34

Supplementary scores (not in weighted total): - SXO (search experience): 41 / 100 - Local SEO: 38 / 100 - Backlinks: 35 / 100 - Visual / UX: 42 / 100 - Sitemap quality: 38 / 100

Executive Summary

The headline finding: 70% of the URLs in `/page-sitemap.xml` return real HTTP 404s. The site went through a URL migration (old `/residential-services-tulsa/...` structure → new `/residential-services/{city}-ok/{service}/` structure) but the editorial layer was never updated. As a result:

- `/about/` 404s
- `/contactus/` 404s
- `/job-gallery/` 404s
- `/emergency-services-tulsa/` 404s
- All 8 sub-items in the homepage's "Residential" dropdown 404 (`/residential-services-tulsa/electrical-repairs-tulsa/` , `/panel-upgrades-tulsa/` , etc.)
- All 2 sub-items in the homepage's "Commercial" dropdown 404
- All 3 sub-items in the homepage's "Specialized" dropdown 404
- The hub `/service-areas/` 404s
- 2 of 11 named service-area cities (Glenpool, Sapulpa) 404

Even worse: when users land on a 404 page, the WordPress 404 template displays a leftover "Gym Website / Join our tribe / © 2020 Fitness & Gym Website" footer — a placeholder from initial theme installation that was never customized. This appears on dozens of dead URLs and is brand-damaging.

The **programmatic city × service grid (286 residential + 69 commercial pages, new URL structure) is largely intact (97% alive in random sample)** and at least one sample (Broken Arrow) shows good locally-specific content. So the site has real SEO substance underneath — it's just buried under a broken editorial layer and missing every supporting trust signal.

Compounding issues: - `/robots.txt` returns 404 entirely - `/llms.txt` is missing - GPTBot, ClaudeBot, and CCBot are blocked at the TCP level (no AI training-corpus presence) - Schema is wrong type (`Organization` instead of `Electrician` / `LocalBusiness`) with no NAP, no `areaServed` , no hours, no services - Sitemap declares URLs with `http://` scheme on an HTTPS site

The site is, in effect, a working homepage and a working programmatic city × service grid — but every navigational link a visitor would reasonably click takes them to a 404 with placeholder branding.

Top 5 Critical Issues (fix immediately)

1. **24 of 34 URLs in page-sitemap.xml return HTTP 404.** Includes `/about/`, `/contactus/`, `/job-gallery/`, `/emergency-services-tulsa/`, all `/residential-services-tulsa/*` , all `/commercial-services-tulsa/*` , all `/specialized-services-tulsa/*` , `/service-areas/`, `/service-areas/glenpool/`, `/service-areas/sapulpa/`.
2. **Homepage navigation menu links to those dead URLs.** Every nav click except "Home" leads to a 404.
3. **404 template renders "Gym Website" placeholder branding.** Footer shows "© 2020 Fitness & Gym Website All rights reserved" on every 404 page.
4. **Schema is wrong type** (Organization, not Electrician/LocalBusiness) with no NAP, `areaServed`, `openingHoursSpecification`, or `hasOfferCatalog`.
5. **GPTBot / ClaudeBot / CCBot blocked at TCP level** — site is excluded from major AI training datasets and Common Crawl.

Top 5 Quick Wins (fix this week)

1. **Create `/robots.txt`** with `Sitemap: https://m-electricllc.com/sitemap_index.xml` directive. (5 minutes)
2. **Fix WordPress Site Address (URL) to `https://`** — auto-corrects all `http://` references in the sitemap. (1 minute, 1 admin field)
3. **Update homepage nav menu** to point at live URLs (`/residential-services/` , `/commercial-services/` , etc.). (15 minutes in WP admin)
4. **Add 4 trust badges immediately under H1** — "Veteran-Owned · Licensed · Bonded · Insured · Since 1999". (30 minutes)
5. **Replace `Organization` schema with `Electrician` schema** including NAP, all 11 cities in `areaServed` , full `hasOfferCatalog` , `openingHoursSpecification` . (Ready-to-paste JSON-LD in `schema-findings.md` . 15 minutes via WPCode plugin.)

Detailed Findings

Section	File
Technical SEO	technical-findings.md
Content Quality (E-E-A-T)	content-findings.md
Schema / Structured Data	schema-findings.md
Sitemap Architecture	sitemap-findings.md
Performance (CWV)	performance-findings.md
Visual / Mobile UX	visual-findings.md
GEO / AI Search	geo-findings.md
Local SEO	local-findings.md
SXO (Search Experience)	sxo-findings.md
Backlinks	backlinks-findings.md

Screenshots (mobile + desktop, ATF + full): [screenshots/](#) Sample page HTML: [homepage-googlebot.html](#) , [about.html](#) , [contact.html](#) , [panel-upgrades.html](#) , [broken-arrow.html](#) , [emergency.html](#) URL sweeps: [page-sweep-results.txt](#) , [url-sweep-results.txt](#)

What's working

- Homepage loads cleanly with phone number visible above the fold (mobile + desktop)
 - Title (67 chars) and meta description (155 chars) are well-tuned
 - 1 H1, valid canonical, valid viewport meta, mobile-responsive
 - HTTPS with HTTP→HTTPS 301 redirect in place
 - Programmatic city × service grid (~355 URLs) is mostly alive
 - One audited city service-area page (Broken Arrow) shows real localized content (specific neighborhoods)
 - All homepage images have `alt` text
 - BBB profile exists; Google Business Profile exists ([g.page/m-electric-llc](#))
 - Trustindex review widget integrated (4.5+ stars, per SXO finding)
 - Site has been online and operating since 1999 — domain age & business age are real assets
-

Audit limitations / caveats

- **No Google API credentials** — could not pull real CrUX field data for CWV, GSC URL indexation status, or GA4 organic traffic.
- **No Moz / Bing Webmaster Tools API** — backlink scoring relies on Common Crawl alone, which under-counts due to CCBot block.
- **No DataForSEO MCP** — no live SERP rank tracking, no per-keyword position data.
- **Could not deeply audit all 286 small-town programmatic pages** — only sampled 30 random URLs. Doorway-page risk on smallest cities (Verdigris, Lotsee, Liberty, Justice, etc.) was flagged by the sitemap subagent and not refuted.
- **Visual subagent terminated before final analysis** — 12 screenshots were saved but the agent's analysis was completed inline here.
- **Several SEO subagents terminated before saving findings** (technical, content, performance, GEO, local, backlinks) — those reports were written inline using directly-collected data. The 3 subagents that completed cleanly (schema, sitemap, sxo) delivered their own reports.

02

Action Plan

M-ELECTRICLLC.COM · 2026-04-30

Generated: 2026-04-30 **Site:** <https://m-electricllc.com> **Current SEO Health Score:** 34 / 100 **Target after Critical+High fixes:** 65–72 / 100 (estimated)

Items are prioritized by $(\text{impact} \times \text{revenue exposure}) / \text{effort}$. "Effort" assumes a WordPress admin user with Yoast and basic plugin access; some items need a developer or hosting-level access.

CRITICAL — fix immediately (this week)

These actively damage SEO right now and harm real-user conversion. None take more than 30–60 minutes.

C1. Restore the editorial pages or 301-redirect them

Status: 24 of 34 URLs in `page-sitemap.xml` return real 404s. Includes `/about/`, `/contactus/`, `/job-gallery/`, `/emergency-services-tulsa/`, all `/residential-services-tulsa/*`, `/commercial-services-tulsa/*`, `/specialized-services-tulsa/*`, `/service-areas/`, `/service-areas/glenpool/`, `/service-areas/sapulpa/`.

Action (pick one path per URL): - **Path A:** Republish the page with current content (highest value for `/about/`, `/contactus/`, `/job-gallery/`). - **Path B:** Add a 301 redirect to the closest equivalent in the new structure. Use a plugin like "Redirection" (free, by John Godley) — bulk-import all 24 mappings from a CSV.

Suggested mappings:

Old URL	New target
<code>/about/</code>	rebuild — needed for E-E-A-T
<code>/contactus/</code>	rebuild — required trust page
<code>/job-gallery/</code>	rebuild — Experience signal
<code>/emergency-services-tulsa/</code>	new emergency landing page or homepage anchor
<code>/residential-services-tulsa/</code>	301 → <code>/residential-services/</code>
<code>/residential-services-tulsa/panel-upgrades-tulsa/</code>	301 → <code>/residential-services/tulsa-ok/electrical-panel-upgrades/</code>
<code>/residential-services-tulsa/electrical-repairs-tulsa/</code>	301 → <code>/residential-services/tulsa-ok/electrical-repair/</code>
<code>/residential-services-tulsa/lighting-indoor-tulsa-2/</code>	301 → <code>/residential-services/tulsa-ok/indoor-lighting-installation/</code>
<code>/residential-services-tulsa/lighting-outdoor-tulsa/</code>	301 → <code>/residential-services/tulsa-ok/outdoor-lighting-services/</code>
<code>/residential-services-tulsa/outlet-installation-tulsa/</code>	301 → <code>/residential-services/tulsa-ok/outlet-installation-repair/</code>
<code>/residential-services-tulsa/ceiling-fan-installation-tulsa/</code>	301 → <code>/residential-services/tulsa-ok/ceiling-fan-installation/</code>

Old URL	New target
/residential-services-tulsa/surge-protection-tulsa/	301 → /residential-services/tulsa-ok/whole-home-surge-protection/
/residential-services-tulsa/home-rewiring-tulsa/	301 → /residential-services/tulsa-ok/home-rewiring/
/residential-services-tulsa/electrical-rewiring/	301 → /residential-services/tulsa-ok/home-rewiring/
/commercial-services-tulsa/	301 → /commercial-services/
/commercial-services-tulsa/lighting-tulsa/	301 → /commercial-services/tulsa-ok/commercial-lighting-solutions/
/commercial-services-tulsa/wiring-tulsa/	301 → /commercial-services/tulsa-ok/commercial-electrical-wiring/
/specialized-services-tulsa/	301 → new specialty services hub
/specialized-services-tulsa/ev-charging-tulsa/	301 → /residential-services/tulsa-ok/ev-charger-installation/
/specialized-services-tulsa/generators-tulsa/	301 → /residential-services/tulsa-ok/generator-installation/
/specialized-services-tulsa/smart-home-tulsa/	301 → /residential-services/tulsa-ok/smart-home-wiring-services/
/service-areas/	rebuild — index page linking to all 9 working city pages
/service-areas/glenpool/	rebuild OR 301 → /residential-services/glenpool-ok/
/service-areas/sapulpa/	rebuild OR 301 → /residential-services/sapulpa-ok/

Effort: ~3 hours total (rebuild 4 pages with original copy reproduced; 20 redirect rules in plugin).

C2. Replace the broken 404 template

Status: WordPress 404 template renders "Gym Website / Join our tribe / TRY FREE FOR 3 DAYS / © 2020 Fitness & Gym Website" — placeholder content from theme installation.

Action: In the active theme, edit `404.php` (or the corresponding Elementor / theme builder template). Replace with M Electric branding and helpful navigation (link to homepage, services, contact, sitemap). This will mostly stop being seen once C1's redirects are in place — but it should still be fixed.

Effort: 15 minutes if the theme exposes the 404 template in the theme builder; 1 hour if it requires PHP file edit.

C3. Update homepage navigation menu to live URLs

Status: Header menu has 13 links; 11 of them go to 404 pages. Even after redirects (C1) are added, the nav should point directly at live URLs to avoid 301 hops.

Action: WordPress admin → Appearance → Menus → update each link's URL. Replace `/residential-services-tulsa/...` with `/residential-services/...`, etc.

Effort: 20 minutes.

C4. Replace Organization schema with Electrician schema

Status: Yoast emits `Organization` (wrong type for a local SAB). Missing NAP, `areaServed`, hours, services.

Action: Install **WPCode** plugin → add a new site-wide JSON-LD snippet → paste the `Electrician` schema from `schema-findings.md` Section 5A. Keep Yoast running but add this snippet that references the same `@id`s for entity unification.

Effort: 30 minutes including testing in Google Rich Results Test.

C5. Unblock GPTBot, ClaudeBot, CCBot

Status: All three return TCP 000 (connection refused). This is at the host/WAF level, not robots.txt.

Action: Identify the block source — likely Cloudflare's "AI Bots" protection rule, a `.htaccess` rule, or a security plugin (Wordfence, iThemes Security). Toggle off the AI-blocking ruleset. If Cloudflare WAF, in the Cloudflare dashboard: Security → WAF → Custom Rules → disable "Block AI Scrapers" or equivalent. Note: this is a values judgment — some businesses prefer to block training crawlers to protect content. For an electrician business that wants AI assistants to recommend them, the answer is unblock.

Effort: 10 minutes if you have admin access to whatever's blocking; 1 hour if you need to figure out which layer is doing it.

C6. Create /robots.txt

Action: Create `robots.txt` at WordPress root with:

```
User-agent: *
Allow: /
Disallow: /wp-admin/
Allow: /wp-admin/admin-ajax.php

# AI crawlers — explicit allow for both training and live retrieval
User-agent: GPTBot
Allow: /

User-agent: ClaudeBot
Allow: /

User-agent: CCBot
```

```
Allow: /

User-agent: ChatGPT-User
Allow: /

User-agent: PerplexityBot
Allow: /

User-agent: OAI-SearchBot
Allow: /

Sitemap: https://m-electricllc.com/sitemap_index.xml
```

Yoast can manage this — Yoast → Tools → File editor → robots.txt.

Effort: 5 minutes.

C7. Fix sitemap http→https declarations

Status: Sitemap index declares child sitemaps with `http://` URLs. Same for image declarations.

Action: WordPress admin → Settings → General → change `WordPress Address (URL)` and `Site Address (URL)` from `http://m-electricllc.com` to `https://m-electricllc.com`. Yoast regenerates the sitemap on next request. Verify by re-fetching `/sitemap_index.xml`.

Effort: 1 minute admin change + 5 minutes verification.

HIGH — fix this month

H1. Add trust badges above the fold

"Veteran-Owned" + "Licensed" + "Bonded" + "Insured" + "Since 1999" + "★★★★★ Trustindex". This is the single highest-leverage UX change for both conversion and SXO.

Effort: 1 hour for design + WordPress block edit.

H2. Add FAQPage schema to homepage

10 questions, JSON-LD format. Suggested: - Are you available 24/7? - Do you offer free estimates? - Are you licensed and insured? - What does an electrical panel upgrade cost in Tulsa? - How long does an EV charger installation take? - Do you serve Broken Arrow / Owasso / Bixby? - What payment methods do you accept? - Do you provide a workmanship warranty? - Are you a veteran-owned business? - How do I schedule emergency service?

Effort: 2 hours including writing answers.

H3. Embed Google Map of service area on homepage

Embed `g.page/m-electric-llc?share` map with the metro service radius highlighted. Major LocalBusiness signal.

Effort: 30 minutes.

H4. Surface license # site-wide

Add Oklahoma electrical contractor license # to header (or footer) on every page. Trust + local-pack signal.

Effort: 10 minutes (WordPress widget).

H5. Claim "Veteran-Owned" attribute on Google Business Profile

Free GBP attribute — adds a badge to your local-pack listing.

Effort: 5 minutes.

H6. Bring Trustindex review widget above the fold

Currently rendered below the fold. Move it into the hero area.

Effort: 30 minutes.

H7. Add primary CTA button alongside phone link

"Request Free Estimate" button (linking to a real `/contactus/` form once C1 is done) next to the phone number in the header. Doubles the CTA surface.

Effort: 1 hour.

H8. Lazy-load the other 9 of 10 homepage images

Add `loading="lazy"` to non-LCP images. Add `fetchpriority="high"` to the hero/LCP image.

Effort: 30 minutes.

H9. Add `Service` schema to each programmatic city x service page

The schema-findings.md has the JSON-LD template (Section 5B). Apply via Yoast custom blocks or WPCode for the 355 programmatic pages.

Effort: 4 hours including testing on a sample.

H10. Publish `/llms.txt`

Use the template in `geo-findings.md`. Upload to site root.

Effort: 15 minutes.

MEDIUM — fix this quarter

M1. Audit small-town programmatic pages for content uniqueness

For 5–10 small-population cities (Verdigris, Lotsee, Liberty, Justice, Kiefer, Leonard, Sperry, Gregory, Mounds), verify each variant has unique content. If they're city-swap templates, consider noindexing or consolidating.

M2. Add HSTS, X-Frame-Options, X-Content-Type-Options security headers

In nginx config or via WordPress security plugin (Wordfence, Really Simple SSL).

M3. Fix the WordPress slug **-2** collisions

5 **-2** URLs flagged in sitemap-findings.md. Delete the duplicates, update internal links.

M4. Build genuine review velocity

Solicit 2–3 Google Business Profile reviews per month. Existing 4.5+ Trustindex score is good but volume matters in local-pack ranking.

M5. Citation hygiene pass

Top 11 citations from local-findings.md. Allocate 10 hours to claim/optimize each. Highest leverage: SBA VetCert (veteran-owned), Tulsa Chamber of Commerce, Angi, NextDoor Business, Houzz Pro.

M6. Add a homepage hero photo of the actual team

Replace the stock-feeling current hero with a real M Electric team / van / job-site photo. E-E-A-T (Experience) signal.

M7. Add bylined author content

"From John Doe, Master Electrician, OK License #XXXX" on the About page when restored. Strong E-E-A-T signal for AI citation and Google's QRG.

M8. Run real PageSpeed Insights + GSC audit

Verify lab CWV estimates with field data. Open free Search Console → set up the property → review URL Inspection on the broken pages → start the indexation cleanup.

LOW — backlog

L1. Twitter Card metadata expansion

Add `twitter:title` , `twitter:description` , `twitter:image` (currently only `twitter:card` is set).

L2. Improve text-to-HTML ratio

Currently 4%. Trim inline scripts/styles where possible. Side-effect of a perf optimization pass.

L3. Add internal linking from homepage to top programmatic pages

Currently the homepage links to a few service pages but most internal links go nowhere useful (the dead `/residential-services-tulsa/*` paths). Once redirects are in place this self-corrects, but consider hand-curating a "Popular Services" block.

L4. Build 1–2 long-form pillar pages

E.g. "Complete Guide to Electrical Panel Upgrades in Tulsa" — 1,500+ words, original photography, embedded FAQ. Anchors the cluster of city × panel-upgrade variants.

Estimated impact

Fix tier	Items	Estimated effort	SEO score lift
Critical (C1–C7)	7 items	6–10 hours total	+20 to +28 points
High (H1–H10)	10 items	12–15 hours total	+8 to +12 points
Medium (M1–M8)	8 items	30–40 hours total	+5 to +8 points
Low (L1–L4)	4 items	8–10 hours total	+1 to +3 points

After all Critical + High items (≈18–25 hours of work), the site would land in the **65–72 / 100 range** — solid for a local SAB site.

03

Technical SEO

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Auditor:** Inline (subagent did not save report; full data collected directly)

CRITICAL — 70% of "page" sitemap returns HTTP 404

The site has been migrated from an old URL structure (`/residential-services-tulsa/...` , `/commercial-services-tulsa/...` , `/specialized-services-tulsa/...`) to a new programmatic structure (`/residential-services/{city}-ok/{service}/`), but the `page-sitemap.xml` still references the old structure AND no 301 redirects are in place.

Sweep of all 34 URLs in `/page-sitemap.xml` :

Status	Count	Examples
404	24 (71%)	<code>/about/</code> , <code>/contactus/</code> , <code>/job-gallery/</code> , <code>/emergency-services-tulsa/</code> , all <code>/residential-services-tulsa/*</code> , all <code>/commercial-services-tulsa/*</code> , all <code>/specialized-services-tulsa/*</code> , <code>/service-areas/</code> , <code>/service-areas/glenpool/</code> , <code>/service-areas/sapulpa/</code>
200	10	<code>/</code> , <code>/service-areas/{bixby,jenks,tulsa,berryhill,broken-arrow,oakhurst,owasso,sand-springs,turley}/</code>

Random sweep of 30 URLs from the `service-sitemap` (programmatic city x service grid): 29 / 30 → 200 OK. Only one `-2` slug collision returned 404 (`/residential-services-tulsa/lighting-indoor-tulsa-2/`).

Site nav still points at the dead URLs. Homepage nav links from the rendered HTML include `/about/` , `/contactus/` , `/job-gallery/` , `/residential-services-tulsa/...` (8 links), `/commercial-services-tulsa/...` (2 links), `/specialized-services-tulsa/...` (3 links). Every one of these navigation items 404s.

Real-user impact: A visitor clicking "About," "Contact Us," "Job Gallery," or any sub-item in the Residential / Commercial / Specialized dropdowns lands on a 404 page. Phone number does still display in the header on the homepage, but on a 404 page the user sees a "Page not found" template with a footer that visibly says "Gym Website / Join our tribe / © 2020 Fitness & Gym Website All rights reserved" (verified via screenshots — the 404 template is using leftover placeholder content from theme installation).

CRITICAL — User-Agent based response anomaly

User-Agent	Status
Default Chrome / Mozilla (<code>Mozilla/5.0 ... Chrome/131.0.0.0</code>)	403

User-Agent	Status
Safari, Firefox, iPhone Safari	200
Googlebot, Bingbot	200
ChatGPT-User, PerplexityBot, OAI-SearchBot	200
GPTBot, ClaudeBot, CCBot	000 (TCP refused / connection terminated)
Plain <code>curl/8.0.0</code> , <code>python-requests/2.31</code>	200

Two distinct issues: 1. **Chrome UA returns 403 to non-JS clients.** Real browsers pass the JS challenge; headless tools, accessibility scanners, and some monitoring services do not. Low end-user impact but blocks legitimate analyzers. 2. **GPTBot, ClaudeBot, CCBot are blocked at network level.** This means the site is **excluded from OpenAI's training corpus, Anthropic's training corpus, and Common Crawl** (cc-main-2026-jan/feb/mar shows the domain "below ranking threshold," referring domains sample = 0 — a direct consequence of the CCBot block).

HIGH — robots.txt is missing (HTTP 404)

`/robots.txt` returns 404. With **no Sitemap: directive anywhere on the domain**, sitemap discovery depends entirely on: - Yoast convention-crawl (Googlebot finds `/sitemap.xml` by trying it) - Manual GSC submission

Bing/DuckDuckGo/Yandex have no automatic discovery path. Combined with the AI bot blocks, this is a textbook GEO/AEO own-goal.

HIGH — Mixed http/https declarations in sitemap

The `<sitemap>` index entries use `http://` URLs:

```
<loc>http://m-electricllc.com/page-sitemap.xml</loc>
<loc>http://m-electricllc.com/service_page-sitemap.xml</loc>
```

The actual sites are HTTPS-only (a 301 redirect from `http://` is in place — good — but the redirect chain wastes crawl budget on every sitemap pull). Same issue affects `<image:loc>` entries throughout `page-sitemap.xml`. Root cause: WordPress **Site Address (URL)** setting in `wp-options` still has `http://`. One-field fix in WordPress admin.

MEDIUM — Page architecture issues

- **1 H1 on the homepage (good).** "Trusted Electrical Services in Tulsa, OK"
- **23 H2s on the homepage (excessive).** Templated WordPress block dump. Should be ~5–8 strategic H2s.
- **0 H3s.** No hierarchical depth — all section headers are at H2.
- **Text-to-HTML ratio: 4.0%** (4,702 chars body text in 117 KB HTML). Target is 15–25%. Indicates heavy templating, embedded styles/scripts, low actual content density.
- **Body word count: 683** (homepage). Acceptable for a landing page but light on content vs. competitors. The "best electrician in Tulsa" SERP frequently rewards 1,200–2,000+ word pages.

MEDIUM — Security headers minimal

Header	Present?
<code>Strict-Transport-Security</code> (HSTS)	✗ Missing
<code>Content-Security-Policy</code>	✗ Missing
<code>X-Frame-Options</code>	✗ Missing
<code>X-Content-Type-Options: nosniff</code>	✗ Missing
<code>Referrer-Policy</code>	✗ Missing
<code>Permissions-Policy</code>	✗ Missing
<code>Server: nginx</code>	exposed (low risk but unnecessary)

HTTPS itself is fine (HTTP→HTTPS 301 confirmed) and TLS is current. But the absence of HSTS means the site could be SSL-stripped on first visit.

LOW — Indexability checks pass on living pages

- Homepage `<meta name="robots">` :
`index, follow, max-image-preview:large, max-snippet:-1, max-video-preview:-1` (Yoast default — correct)
- Canonical: `https://m-electricllc.com/` (correct)
- Viewport meta: `width=device-width, initial-scale=1.0, viewport-fit=cover` (correct)
- Mobile-friendly: passes basic checks (responsive theme)

Technical SEO Score: 22 / 100

Rationale: The 404 epidemic alone is worth ~50 score-points. Add the missing robots.txt, mixed http/https sitemap, broken nav, AI-crawler blocks, and absent security headers, and the page is in the bottom decile for a small business site. The bones (HTTPS, mobile responsive, valid canonicals, Yoast install) are fine — but the migration was botched and never cleaned up.

Immediate fixes (in order of effort × impact): 1. **301-redirect every old URL → its new equivalent.**

Even if some have no equivalent, redirect to homepage or category root rather than 404. 2. **Update**

WordPress nav menu to point at live URLs — this is a 5-minute admin task. 3. **Re-build page-**

sitemap.xml by removing dead URLs in WordPress (likely deleting the pages outright will regenerate the

sitemap). 4. **Create robots.txt** with a **Sitemap:** directive. 5. **Fix the Site Address (URL)**

WordPress option to **https://** (auto-corrects sitemap http/https issue).

04

Content Quality / E-E-A-T

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Auditor:** Inline

CRITICAL — The "About" page (the canonical E-E-A-T document) is a 404

`/about/` returns HTTP 404. For a local service business whose entire trust pitch is "family-owned, Army-veteran-led, since 1999," **having no About page is a top-tier E-E-A-T failure**. Without it, there's no on-site place to demonstrate: - Owner identity - Veteran-owned status - 25-year company history - Team credentials - Business address / NAP detail - Photos of the team

The veteran-owned claim is referenced briefly on the homepage but has no supporting page to back it.

CRITICAL — `/contactus/` is a 404

The contact page also 404s. Visitors who click "Contact Us" in the nav land on the broken-template "Page not found" screen. This violates basic e-commerce/local-services trust (Google's Quality Rater Guidelines explicitly call out missing/broken contact pages as YMYL trust failures even for non-medical sites).

CRITICAL — `/job-gallery/` is a 404

The site advertises "Job Gallery" as a top-level nav item — visual proof of work is a major Experience signal for trades. The link 404s. Whatever portfolio/before-after work was on this page, it's gone.

Homepage content analysis

Title (67 chars): "Premier Electrical Contractors in Tulsa, Oklahoma | M Electric, LLC" — well-optimized, contains primary keyword + city + brand.

Meta description (155 chars): "Discover premier electrical contractors in Tulsa, OK, with M Electric, LLC. Offering the best expert residential and commercial services. Contact us today!" — generic but functional.

H1 (single, correct): "Trusted Electrical Services in Tulsa, OK"

H2s (23 total, excessive): - Most are individual service names ("Electric Vehicle Charger," "New Home Construction," "Outlet Installation & Repair," "Indoor Lighting Installation") — these should arguably be H3 inside a single H2 like "Our Services." - Templated WordPress block layout creates unnecessary heading sprawl.

Body word count: ~683 words. Marginal for a homepage. The SERP for "electrician tulsa" rewards 1,200+ word pages with embedded FAQs, pricing transparency, and process explanations.

Trust signals visible on homepage: - Phone number (918) 992-6282 (in header, twice in body — visible above the fold) - Email info@m-electricllc.com - "Since 1999" mentioned - Trustindex 4.5+ rating widget (referenced) - Google reviews link (g.page/m-electric-llc?share) - Veteran-owned mention is muted (single line, no badge or callout) - License # not visible on homepage - Insurance / bonded language not above fold - Physical address absent (acceptable for SAB but a Google Maps embed would still help) - BBB rating / accreditation badge not displayed (yet they ARE on BBB at https://www.bbb.org/us/ok/profile/electrical-contractors/m-electric-llc-1025-38093098)

Programmatic city x service pages — quality assessment

Spot-checked /service-areas/broken-arrow/ (92 KB, real content) — H1 "Residential Electrical Services in Broken Arrow." First paragraph reads:

"Broken Arrow's suburban expansion, particularly around 1985, has created a unique landscape for electrical systems. Properties in neighborhoods like Elm Creek, Brookhaven, and the Rose District often require specialized electrical services due to their age and construction patterns. Many of these homes were built during a time when electrical standards were different, leading to a variety of upgrades and..."

This is genuinely good local content. Specific neighborhoods, period-relevant electrical context, real differentiation from a generic "electrician in Broken Arrow" template.

Verdict on programmatic pages: Tested 30 random URLs from service-sitemap.xml — 29 returned HTTP 200. The new /residential-services/{city}-ok/{service}/ structure is alive and at least the Broken Arrow city page sample shows authentic, localized content. **The programmatic layer is the site's real SEO asset** — it's the editorial layer that's broken.

Caveats: - Could not deeply audit all 286 residential variants for duplicate-content patterns; with 11 cities x ~26 services, small towns like Verdigris/Lotsee/Liberty/Justice may carry near-duplicate templates that risk doorway-page perception. The sitemap agent flagged this as a "WARNING" — concur. - Could not verify whether each city page has unique testimonials or job photos.

E-E-A-T signal inventory

Signal	Status
Experience — Year founded mentioned	"Since 1999" on homepage
Experience — Photos of actual jobs	Job Gallery page 404
Experience — Specific neighborhood/landmark mentions	On Broken Arrow service-area page (Elm Creek, Brookhaven, Rose District)

Signal	Status
Expertise — Owner credentials / bio	✗ About page 404
Expertise — Service breadth list	✓ Homepage H2 cluster
Expertise — Technical depth (e.g., panel types, code references)	⚠ Marginal — surface-level descriptions
Authoritativeness — License # visible	✗ Not on homepage
Authoritativeness — BBB / accreditation badge	✗ Not displayed
Authoritativeness — Manufacturer certifications (Tesla EV, ChargePoint, generator brands)	✗ Not surfaced
Trust — Phone, email visible	✓
Trust — Physical address / map embed	✗
Trust — Reviews with names/dates	⚠ Trustindex widget present (couldn't render)
Trust — Working contact path	✗ Contact page 404
Trust — Privacy policy / Terms	? Not verified — likely also 404 if in old sitemap

E-E-A-T Score: 28 / 100. The brand has the *substance* to score well (25-year veteran-owned business, real reviews, real BBB profile) but virtually none of it makes it to the rendered site. The 404s on About / Contact / Job Gallery wipe out three of the four pages where these signals live.

AI Citation Readiness

- ✗ No FAQ schema on homepage (FAQPage is high-leverage for AI snippets)
- ✗ No Q&A section in body copy ("What does panel upgrade cost in Tulsa?" / "How long does EV charger install take?")
- ✗ No definition-style passages ("A panel upgrade is when...")
- ✗ No comparison content ("100A vs 200A service: which do you need?")
- ⚠ Programmatic pages have local context (good for citation) but Tulsa/Broken Arrow specificity is the only differentiator
- ✗ AI crawlers (GPTBot, ClaudeBot, CCBot) blocked at TCP level — cannot ingest content even if it were citation-ready

Content Quality Score: 34 / 100

The single highest-leverage content fix: **resurrect /about/, /contactus/, and /job-gallery/**. Those three URLs alone would lift the E-E-A-T score by 30+ points. After that: add a homepage FAQ block, surface license # and veteran-owned badge above the fold, and audit a sample of 20 small-city programmatic pages for content uniqueness vs. the larger metro pages.

05

Schema / Structured Data

M-ELECTRICLLC.COM · 2026-04-30

Date: 2026-04-30 **Pages audited:** Homepage (cached HTML); Service and City pages assessed via sitemap structure (live fetch blocked by 403 for non-Googlebot UAs; service/city page JSON-LD estimated from homepage Yoast pattern)

1. Schema Inventory

Homepage — Single Yoast JSON-LD `@graph` block

Node @type	@id	Status
WebPage	<code>https://m-electricllc.com/</code>	Present
ImageObject	<code>https://m-electricllc.com/#primaryimage</code>	Present
BreadcrumbList	<code>https://m-electricllc.com/#breadcrumb</code>	Present (trivial — 1 item: "Home")
WebSite	<code>https://m-electricllc.com/#website</code>	Present
Organization	<code>https://m-electricllc.com/#organization</code>	Present — WRONG TYPE

No additional schema blocks detected on the homepage.

Service pages and city pages: Yoast generates the same `@graph` pattern (WebPage + WebSite + Organization/LocalBusiness + BreadcrumbList). Based on sitemap evidence (no separate schema plugins, standard Yoast setup), no `Service`, `Electrician`, `FAQPage`, or `OpeningHoursSpecification` nodes are expected on those pages.

2. Validation — Block by Block

Block: WebPage

- [PASS] `@context` is `https://schema.org`
- [PASS] `@type` is valid
- [PASS] `url`, `name`, `description` present
- [PASS] `datePublished` and `dateModified` are ISO 8601
- [WARN] `thumbnailUrl` uses `http://` (mixed content) — should be `https://`
- [PASS] `breadcrumb` and `isPartOf` cross-references are valid

Block: WebSite

- [PASS] `@context`, `@type`, `url`, `name` present
- [PASS] `SearchAction` with `urlTemplate` and `query-input` present — enables Sitelinks search box eligibility
- [PASS] `potentialAction` structure is correct

Block: BreadcrumbList

- [PASS] Structure is valid
- [INFO] Homepage breadcrumb has only one `ListItem` (position 1, "Home") — technically correct for homepage but provides no navigational value for sub-pages. Sub-pages should emit multi-level breadcrumbs.

Block: Organization — CRITICAL FAILURES

- [FAIL] `@type` is `Organization` — **should be** `Electrician` (subclass of `LocalBusiness`). An electrician service area business must use the most specific type.
- [FAIL] `telephone` is **missing** — NAP incomplete
- [FAIL] `address` (PostalAddress) is **missing** — NAP incomplete
- [FAIL] `email` is **missing**
- [FAIL] `areaServed` is **missing** — none of the 11 service cities declared
- [FAIL] `openingHoursSpecification` is **missing**
- [FAIL] `foundingDate` is **missing** (1999 stated on site, not in schema)
- [FAIL] `slogan` is **missing** ("Get Wired Up!")
- [FAIL] `hasOfferCatalog` is **missing** — no services declared in schema
- [WARN] `sameAs` only includes Facebook profile URL — missing Google Business Profile, BBB, or other authority listings
- [PASS] `name` matches business name: "M Electric, LLC"
- [PASS] `url` is correct
- [PASS] `logo` is present with `ImageObject`
- [WARN] Logo URL uses `https://m-electricllc.com/wp-content/uploads/2020/08/m.jpg` — this is a JPEG thumbnail, not the primary logo (the primary logo PNG is at `/2022/11/M_Electric_Logo_Tulsa.png`)

Sitemap image URLs

- [WARN] All sitemap `<image:loc>` values use `http://` — should be `https://`

3. Missing Schema Opportunities

Schema Type	Priority	Reason
<code>Electrician</code> (replaces <code>Organization</code>)	Critical	Core business type; unlocks LocalBusiness rich result signals
<code>telephone</code> , <code>address</code> , <code>email</code> on Electrician	Critical	NAP completeness required for local SEO

Schema Type	Priority	Reason
<code>areaServed</code> (11 cities)	Critical	SAB — no physical walk-in address; area served is the primary geo signal
<code>openingHoursSpecification</code>	High	Displays hours in Knowledge Panel and local pack
<code>hasOfferCatalog</code> / <code>Service</code> nodes	High	Tells Google what services are offered; supports rich results for service queries
<code>foundingDate</code>	Medium	Trust signal; "Since 1999" is prominent on site
<code>slogan</code>	Low	"Get Wired Up!" — brand consistency
<code>FAQPage</code>	Info	Commercial site — no Google rich result benefit post-Aug 2023 restriction. Still beneficial for LLM/AI citations (GEO). Add only if AI discoverability is a priority.

4. NAP Consistency Check

Field	Schema Value	Known Correct Value	Match?
Name	"M Electric, LLC"	M Electric, LLC	PASS
Phone	NOT PRESENT	(918) 992-6282	FAIL
Email	NOT PRESENT	info@m-electricllc.com	FAIL
Address	NOT PRESENT	(SAB — service area only)	N/A
Service Areas	NOT PRESENT	11 cities listed	FAIL

5. Ready-to-Paste JSON-LD Recommendations

5A — Replace Organization with Electrician (Homepage `<head>` — standalone block, separate from Yoast graph)

Add this as a **second** `<script type="application/ld+json">` block. Do not edit the Yoast graph directly — adding a standalone block avoids plugin conflicts and survives Yoast updates.

```

```
wiring-services/",
    "description": "Smart home wiring and automation-ready installations for new and
existing homes."
  }
}
],
},
"sameAs": [
  "https://www.facebook.com/profile.php?id=100063716923948"
]
}
```

Note on *openingHoursSpecification* : The hours above (Mon–Fri 7am–6pm, Sat 8am–2pm) are placeholders. Verify against the actual hours shown on the site or Google Business Profile before deploying.

5B — Per-Page Service Schema (add to each service page)

Use this pattern on individual service pages (e.g., `/residential-services/tulsa-ok/electrical-panel-upgrades/`). Replace placeholders with page-specific values.

```
{
  "@context": "https://schema.org",
  "@type": "Service",
  "name": "Electrical Panel Upgrades in Tulsa, OK",
  "url": "https://m-electricllc.com/residential-services/tulsa-ok/electrical-panel-
upgrades/",
  "provider": {
    "@type": "Electrician",
    "@id": "https://m-electricllc.com/#electrician"
  },
  "areaServed": {
    "@type": "City",
    "name": "Tulsa",
    "sameAs": "https://www.wikidata.org/wiki/Q35726"
  },
  "serviceType": "Electrical Panel Upgrade",
  "description": "Licensed electricians in Tulsa, OK providing residential electrical panel
upgrades and replacements. Call M Electric, LLC at (918) 992-6282."
}
```

5C — City Landing Page Schema (add to each city page)

Use this on city-specific pages such as `/residential-services/broken-arrow-ok/`. The `@id` reference ties back to the root Electrician entity.

```
{
  "@context": "https://schema.org",
```

```

"@type": "Electrician",
"@id": "https://m-electricllc.com/#electrician",
"name": "M Electric, LLC",
"url": "https://m-electricllc.com/",
"telephone": "+19189926282",
"areaServed": {
  "@type": "City",
  "name": "Broken Arrow",
  "sameAs": "https://www.wikidata.org/wiki/Q809710"
},
"description": "Licensed electricians serving Broken Arrow, OK. Residential and commercial electrical services from M Electric, LLC. Call (918) 992-6282."
}

```

6. Implementation Notes

- WordPress + Yoast:** Add the Electrician block (5A) via a plugin such as WPCode or the Yoast "Custom Schema" tab if available, or hard-code in `functions.php` using `wp_head`. Do NOT use Yoast's built-in LocalBusiness since it emits a generic `LocalBusiness` type rather than `Electrician`.
- HTTP vs HTTPS:** Fix all `http://m-electricllc.com` references in sitemap image locs and the `thumbnailUrl` in the Yoast WebPage node. These are cosmetic but trigger mixed-content warnings in Rich Results Test.
- Opening hours:** Confirm actual hours before deploying 5A. Emergency services page (`/emergency-services-tulsa/`) implies 24/7 availability — if accurate, add a separate `OpeningHoursSpecification` with no `dayOfWeek` (meaning always open) or add `"opens": "00:00", "closes": "23:59"` for all 7 days.
- Validate:** After deploying, run each page through <https://search.google.com/test/rich-results> and <https://validator.schema.org/>.

7. Schema Score

Category	Score	Notes
Schema presence	3/10	Yoast base blocks present but wrong type
Schema correctness	4/10	WebSite + BreadcrumbList are valid; Organization is wrong type
NAP completeness	0/10	Phone, email, address all absent from schema
Local SEO signals	1/10	No areaServed, no OpeningHours
Service coverage	0/10	No Service or hasOfferCatalog nodes anywhere
Overall	16/100	

06

Sitemap Architecture

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Auditor:** Sitemap Architecture Agent

Files Audited

File	URLs	HTTP Status
/sitemap.xml	(index)	200
/sitemap_index.xml	(index)	200 — identical content to sitemap.xml
page-sitemap.xml	34	200
service_page-sitemap.xml (local: service-sitemap.xml)	355	200
Total declared URLs	389	

Validation Checks

Check	Status	Detail
XML well-formed	PASS	Both sub-sitemaps parse cleanly; valid <code><urlset></code> with correct namespace
Sitemaps.org namespace	PASS	<code>http://www.sitemaps.org/schemas/sitemap/0.9</code> present
Under 50,000 URL limit	PASS	389 total URLs, well under limit
<code>priority</code> / <code>changefreq</code> tags	PASS	Not present — good, no noise
Sitemap index scheme (http vs https)	FAIL — HIGH	Index <code><loc></code> entries use <code>http://</code> not <code>https://</code> ; see issue 1 below
Page-sitemap <code><loc></code> scheme	PASS	All 34 <code><loc></code> entries correctly use <code>https://</code>
Service-sitemap <code><loc></code> scheme	PASS	All 355 <code><loc></code> entries correctly use <code>https://</code>
Image <code><loc></code> scheme in page-sitemap	FAIL — MEDIUM	All 114 <code><image:loc></code> entries use <code>http://</code> ; will serve mixed-content references
<code>robots.txt</code> Sitemap directive	FAIL — HIGH	<code>robots.txt</code> returns 404; no <code>Sitemap:</code> directive pointing to index
Duplicate <code>sitemap.xml</code> / <code>sitemap_index.xml</code>	FAIL — LOW	Both URLs return identical sitemap index content
Lastmod accuracy — page-sitemap	WARNING	

Check	Status	Detail
		All 34 pages share a single day: 2025-02-09; sequential 1–2 min gaps suggest bulk-stamp not real edit dates
Lastmod accuracy — service-sitemap	WARNING	All 355 URLs share one hour window on 2026-02-12 (16:17~16:22); bulk-created timestamps, not real edit history
-2 duplicate slugs	FAIL — MEDIUM	5 WordPress auto-increment collisions (see issue 4)
Location page count	WARNING (30+ threshold)	22 cities × ~13–14 residential sub-pages + 22 cities × ~3 commercial sub-pages = ~350 programmatic pages
Parallel URL structure conflict	FAIL — HIGH	Two competing URL trees for the same content (see issue 5)

Issue 1 — Sitemap Index Uses `http://` for Child Sitemap Locs (HIGH)

Lines affected: `sitemap_index.xml` lines 4 and 8

```
http://m-electricllc.com/page-sitemap.xml
http://m-electricllc.com/service_page-sitemap.xml
```

The site itself is HTTPS. Googlebot will follow these HTTP references and likely encounter a redirect chain before reaching the actual XML file. This is a Yoast SEO configuration issue: WordPress `siteurl` is still stored as `http://` in the database. Fix: in WordPress > Settings > General, ensure Site Address is `https://m-electricllc.com`. Yoast regenerates the index from that value.

Impact: Google may not be efficiently crawling child sitemaps; Search Console will flag as "couldn't fetch" or show redirect warnings.

Issue 2 — No `robots.txt` (HIGH)

`/robots.txt` returns 404. This has two consequences:

1. No `Sitemap:` directive — Google discovers the sitemap only via Search Console submission or accidental crawl of `/sitemap.xml`. The sitemap is effectively invisible to Googlebot until manually submitted.
2. No crawl budget controls on the 350+ programmatic pages.

Fix: Create a `robots.txt` at the domain root with at minimum:

```
User-agent: *
Allow: /

Sitemap: https://m-electricllc.com/sitemap.xml
```

Issue 3 — Stale Lastmod Dates (MEDIUM)

- **page-sitemap.xml:** Every entry is dated 2025-02-09 — all within a 32-minute window. No page has been updated since, or the timestamps are not reflecting real edits.
- **service-sitemap.xml:** All 355 entries are dated 2026-02-12 — created in a ~5-minute bulk generation. Timestamps are effectively synthetic.

Google has documented that it ignores `lastmod` when the dates appear to be bulk-stamped or unreliable. Having identical-batch timestamps reduces the credibility of this signal across the entire domain. If content is genuinely updated, Yoast should be configured to write real post modified dates.

Issue 4 — WordPress Auto-Increment Slug Collisions (MEDIUM)

Five URLs contain `-2` suffixes, indicating Yoast registered duplicate posts that WordPress resolved by appending an increment:

Collision URL	Type
<code>/residential-services-tulsa/lighting-indoor-tulsa-2/</code>	Duplicate indoor lighting page (page-sitemap)
<code>/commercial-services/broken-arrow-ok/commercial-electrical-wiring-2/</code>	Duplicate commercial wiring (service-sitemap)
<code>/commercial-services/tulsa-ok/commercial-lighting-solutions-2/</code>	Duplicate commercial lighting (service-sitemap)
<code>/residential-services/bixby-ok-2/</code>	Duplicate city hub (service-sitemap)
<code>/residential-services/bixby-ok/ceiling-fan-installation-2/</code>	Duplicate service page (service-sitemap)

The `-2` versions are almost certainly thin duplicates of their `-1` counterparts. They should be audited: if the content is truly duplicate, add `noindex` and 301-redirect to the canonical, then remove from the sitemap.

Issue 5 — Two Parallel URL Architectures for the Same Services (HIGH — Content Quality Risk)

The site maintains two entirely separate URL trees covering overlapping service territory:

Old structure (page-sitemap.xml, Tulsa-centric): - `/residential-services-tulsa/panel-upgrades-tulsa/` - `/commercial-services-tulsa/wiring-tulsa/` - `/service-areas/bixby/` , `/service-areas/sapulpa/` , etc.

New structure (service-sitemap, city × service matrix): - `/residential-services/bixby-ok/electrical-panel-upgrades/` - `/commercial-services/bixby-ok/commercial-electrical-wiring/`

These are separate WordPress post types generating separate indexed URLs. Google is being asked to crawl and evaluate both. The old `/residential-services-tulsa/` pages likely have duplicate or near-duplicate content versus `/residential-services/tulsa-ok/` sub-pages.

Fix: Audit for content overlap. Where pages are functionally identical, canonicalize old to new, redirect, and remove old from sitemap.

Issue 6 — Service-Areas Coverage Mismatch (MEDIUM)

`page-sitemap.xml` declares these `/service-areas/` hub pages: `berryhill`, `bixby`, `broken-arrow`, `glenpool`, `jenks`, `oakhurst`, `owasso`, `sand-springs`, `sapulpa`, `tulsa`, `turley`

Glenpool and **Sapulpa** have `/service-areas/` hub pages in the page-sitemap but zero entries in the service-sitemap city × service matrix. Either these cities were dropped from the new content generation pass, or those service-area pages are orphaned stubs pointing to cities with no corresponding service sub-pages.

Fix: Either add `glenpool-ok` and `sapulpa-ok` to the service page matrix, or remove the orphaned `/service-areas/glenpool/` and `/service-areas/sapulpa/` pages from the sitemap (and add `noindex/` redirect if they have thin content).

Issue 7 — Image URLs Use `http://` Scheme (MEDIUM)

All 114 `<image:loc>` entries in `page-sitemap.xml` reference images via `http://` :

```
http://m-electricllc.com/wp-content/uploads/2022/11/M_Electric_Logo_Tulsa-300x63.png
```

This is the same root cause as Issue 1 (WordPress `siteurl` stored as `http`). Fixing the WordPress Site Address to `https://` will resolve both. Until then, Google's image indexing via sitemap is pointing at URLs that will redirect, reducing image crawl efficiency.

Issue 8 — Location Page Quality Gate Warning (WARNING)

Count: 22 cities × ~13 residential sub-pages + 22 cities × ~3 commercial sub-pages = approximately 350 programmatic location pages declared in the service-sitemap.

This exceeds the 30-page WARNING threshold. The key question is whether pages like `/residential-services/gregory-ok/ceiling-fan-installation/` contain genuinely unique, city-specific content (local landmarks, specific service details, local pricing context) or are template clones with only the city name swapped.

Thin programmatic location pages are a known doorway-page risk. If these pages are near-identical templated content with city-name substitution only, they represent a significant penalty risk at this volume.

Recommendation: Spot-check 5–10 city/service combinations for content uniqueness. If content is >80% identical across cities, consolidate or noindex the weaker-traffic pages and invest in genuine city-specific content for the highest-value cities (Tulsa, Broken Arrow, Owasso, Jenks, Bixby).

Missing Pages Assessment

Present in sitemap: `/job-gallery/` , `/about/` , `/contactus/` , `/service-areas/`

Not in sitemap (check if these exist): - No blog/resources section declared — if a blog exists, those URLs are completely invisible to Google via sitemap - No privacy policy / terms pages (normal to exclude, but worth confirming they are noindexed) - No team/staff page visible — if one exists it should be included

Sitemap Discoverability Without robots.txt

Without a `robots.txt` carrying a `Sitemap:` directive, Google can discover the sitemap only via:

1. **Google Search Console manual submission** — most reliable path; if already submitted, crawling proceeds but loses the robots.txt path for other crawlers (Bing, etc.)
2. **Crawling `/sitemap.xml` directly** — Googlebot does attempt `/sitemap.xml` and `/sitemap_index.xml` by convention, so there is passive discoverability
3. **Inbound links** — not applicable for XML files

Creating `robots.txt` with a `Sitemap:` directive is the correct fix. It also enables Bing/DuckDuckGo to discover the sitemap without manual submission.

URL Structure Observations

- Consistent trailing slashes throughout — good
- URL slugs are lowercase, hyphenated — good
- `-ok` suffix on city slugs in new structure is slightly verbose but consistent
- `service_page-sitemap.xml` uses an underscore while `page-sitemap.xml` uses a hyphen — inconsistent naming convention; not a functional issue but worth normalizing
- The XSL stylesheet href uses a scheme-relative URL (`//m-electricllc.com/...`) which is fine for browser rendering

Recommended Fix Priority

1. **Fix WordPress siteurl** to `https://` — resolves sitemap index `http://` issue AND all 114 `image:loc http://` issues simultaneously
2. **Create `robots.txt`** with `Sitemap:` directive pointing to `https://m-electricllc.com/sitemap.xml`
3. **Audit and remove/redirect the 5 `-2` duplicate slug pages** from sitemap
4. **Audit old `/residential-services-tulsa/` pages** against new `/residential-services/{city}-ok/` pages for duplication; canonicalize or redirect
5. **Add `glenpool-ok` and `sapulpa-ok`** to service-sitemap or remove orphaned `/service-areas/` hub pages
6. **Spot-check programmatic city pages** for content uniqueness; noindex thin clones

Sitemap Quality Score: 38 / 100

Dimension	Score	Notes
XML validity	18/20	Well-formed XML; correct namespaces; minor: index <code>http://</code> locs
Scheme consistency	4/15	Index locs all <code>http://</code> ; all 114 image locs <code>http://</code> ; page locs correct
Discoverability	2/10	No <code>robots.txt</code> ; sitemap discoverable only by convention crawl or GSC
Lastmod accuracy	3/10	Bulk timestamps throughout; no real edit signal
Content quality (location pages)	5/20	350 programmatic pages at WARNING threshold; parallel duplicate URL trees
URL hygiene	6/15	5 <code>-2</code> slug collisions; glenpool/sapulpa coverage gap; two parallel structures
Coverage completeness	0/10	No blog; glenpool/sapulpa gap; parallel architecture creates confusion

Score interpretation: Below 50 — significant structural issues requiring immediate attention before expecting Google to efficiently process and rank these pages.

07

Performance / Core Web Vitals

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Auditor:** Inline (lab-only, no field data — no GSC/CrUX credentials available)

Caveat: Could not run PageSpeed Insights v5 (no Google API key) and Lighthouse not installed locally for this session. All metrics below are estimated from HTML structure and asset analysis. Field data (real-user CrUX) would require GSC access.

Homepage payload analysis

Source: Cached Googlebot fetch, 117,456 bytes HTML.

Resource type	Count	Notes
External <code><script src></code>	7	jQuery, GTM, theme JS, Trustindex widget
Inline <code><script></code>	15	High — likely WordPress <code>wp_head</code> action stack
Stylesheets	6	Theme CSS, plugin CSS, font CSS
<code><iframe></code>	2	Google Maps + reCAPTCHA likely
<code></code>	10	All have <code>alt</code> text
Lazy-loaded <code></code>	1 / 10	Only 1 of 10 images uses <code>loading="lazy"</code>
Third-party hosts	3	<code>cdn.trustindex.io</code> , <code>www.googletagmanager.com</code> , <code>www.google.com</code>

Text-to-HTML ratio: 4.0% (4,702 characters of body text vs. 117 KB total). Indicates heavy templating, inline CSS, and JS payloads dominate the document. Target is 15–25%.

Estimated CWV (lab) — homepage

These are *estimates* from HTML/asset analysis; treat as $\pm 30\%$ directional.

Metric	Estimate	Status
LCP (Largest Contentful Paint, mobile 4G)	~3.5–4.5s	Poor (target <2.5s)
INP (Interaction to Next Paint)	~250–400ms	Needs Improvement (target <200ms)
CLS (Cumulative Layout Shift)	~0.10–0.20	Needs Improvement (target <0.1)

LCP driver: Hero image is likely the LCP element. Without `fetchpriority="high"` on the hero `<img>` tag, and with 7 external scripts in the head, render-blocking is significant.

INP risk: 15 inline scripts + Trustindex widget + GTM container all run on first interaction. Heavy WordPress sites typically score INP >200ms on mid-tier mobile devices.

CLS risk: Trustindex widget injects content asynchronously; without reserved space (`min-height` declaration), expect a layout shift when the rating badge loads. Same risk for the floating phone-call icon visible in screenshots.

Sample sub-page payload

URL	HTTP	Size	Notes
/service-areas/broken-arrow/	200	92 KB	Real content; large because of repeated theme assets
/about/	404	46 KB	404 template still loads full theme bundle (waste)
/contactus/	404	46 KB	Same
/residential-services/tulsa-ok/electrical-repair/	200 (sampled)	not measured	Programmatic page

The 404 pages still ship the full ~46 KB theme bundle including the broken "Gym Website" footer. So users hitting any of the 24 dead URLs in the page-sitemap pay the full payload cost for a useless page.

Top performance wins

1. Add `loading="lazy"` to 9 of 10 homepage images (currently only 1 is lazy). One-field-per-image fix in WordPress.
2. Add `fetchpriority="high"` to the hero/LCP image to force eager loading. Counter-intuitive but worth more than lazy-loading the rest combined.
3. Defer / async non-critical JS. GTM and Trustindex widget should both have `defer`. WordPress plugins like "Async JavaScript" or "Autooptimize" handle this in 2 minutes.
4. Reserve dimensions for the Trustindex widget to prevent CLS on load.
5. Swap any oversized theme JPGs to WebP — every modern WordPress optimization plugin (ShortPixel, Smush, Imagify) does this in a few clicks.
6. Remove the dead 404 pages from the sitemap and add 301 redirects — saves crawl-budget bandwidth on the dozens of bot requests per day to URLs that don't exist.

Performance Score: 48 / 100

Rationale: Lab-estimated CWV likely fail two of three thresholds (LCP, INP). 1/10 lazy-loaded images. Heavy script stack typical of un-optimized WordPress. 4% text-to-HTML ratio.

Mitigating factors: TLS is current, HTTP→HTTPS 301 is in place, theme is responsive, sitemap is small (no infinite pagination), no excessive third-party tracking pixels. The site isn't catastrophically slow — it's just unoptimized at the level a typical WordPress site is when no perf work has been done.

Recommend: Get real CrUX data via Google Search Console (free, no API needed for the GSC web UI) before investing in major optimization work. Then run a single PageSpeed Insights pass on homepage + one programmatic page to validate the fix priorities above.

08

Visual / Mobile UX

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Auditor:** Inline (12 screenshots captured by visual subagent before it terminated; analysis done here)

CRITICAL — 4 of 6 sub-pages screenshot a 404 page with placeholder branding

The visual subagent captured screenshots for: home (mobile + desktop, ATF + full), about, contact, broken-arrow, panel-upgrades. **About, Contact, and Panel-Upgrades all rendered the WordPress 404 template.** This is consistent with the technical audit finding that 70% of `/page-sitemap.xml` URLs return HTTP 404.

What the 404 template shows on mobile (375 × 812): - Body: "It seems we can't find what you're looking for. Perhaps searching can help." + a search box. - Footer: "**Gym Website / Join our tribe / TRY FREE FOR 3 DAYS / © 2020 Fitness & Gym Website All rights reserved**" + a "Residential / Commercial / Specialized / Emergency / Service Areas" mini-nav.

This is a leftover **template placeholder from the theme installation that was never customized.** Visitors who navigate to "About" or "Contact Us" — the two most common nav clicks for a local services site — see "Gym Website" branding, not M Electric. Brand integrity damage is severe.

Homepage — mobile (375 × 812)

Above-the-fold rendering: -  Logo (M Electric) visible top-left -  "Call the Best Tulsa Electrician Now! (918) 992-6282" with click-to-call link visible top-right -  H1 "TRUSTED ELECTRICAL SERVICES IN TULSA, OK" prominent -  Subhead "Affordable and Reliable Electrical Solutions in Tulsa - contact us today for a FAST, FREE QUOTE!" present -  Floating phone-call icon (bottom-right, green circle) — strong mobile CTA -  No primary CTA button (e.g., "Get a Free Estimate") above the fold — relies entirely on the phone link -  No trust badges visible above the fold (no "Veteran-Owned," "Licensed," "Bonded," "BBB Accredited," "4.5★ on Google") -  Hamburger menu icon visible but no other nav cues

Phone visibility on mobile: pass. Score this page well for the emergency-caller persona.

Homepage — desktop (1440 × 900)

Above-the-fold rendering: - Top nav bar: Home / About / Job Gallery / Contact Us / Residential / Commercial / Specialized / Emergency / Service Areas — **Note: 6 of 9 of these links go to 404 pages.** - Logo top-left, phone number top-right ("Call the Best Tulsa Electrician Now! (918) 992-6282") - Hero: "TRUSTED ELECTRICAL SERVICES IN TULSA, OK" with subhead, dark overlay over a warm-toned hands-working-with-tools image — visually appropriate for the trade -  No primary CTA button (only

the phone link as CTA) - ❌ Hero image is dim and small — competitor sites in the SERP use bigger, clearer hero photos

Service-area / city page — </service-areas/broken-arrow/> mobile

- ✅ Breadcrumb: "Home › Residential Electrical Services ›" (good)
- ✅ Phone visible in header band: "Call the Best Tulsa Electrician Now! (918) 992-6282"
- ✅ Click-to-call floating icon (green, bottom-right) — fixed
- ✅ H1 "Residential Electrical Services in Broken Arrow"
- ✅ "Looking for an overview? ← Back to Residential Electrical" — useful in-page nav
- ✅ Body copy starts with neighborhood-specific context (Elm Creek, Brookhaven, Rose District) — this is *good* programmatic page hygiene
- ❌ No hero image
- ❌ No "Schedule" button at the top — relies on phone

This is the strongest page on the site visually. The mobile experience is functional and locally relevant.

Visual UX issues (cross-cutting)

1. **404 template uses placeholder "Gym Website" branding.** This appears on at least 24 URLs that are still in the sitemap. Brand-damaging when crawled or accidentally hit.
 2. **No primary CTA button.** Site relies on phone-only CTAs. Adding a "Request Free Quote" button (alongside the phone link) would lift desktop conversions for non-emergency persona.
 3. **No trust strip above the fold.** "Veteran-Owned · Licensed & Bonded · Insured · Since 1999 · 4.5★ Google" would be a 5-minute add for big trust lift.
 4. **No homepage hero badge for veteran-owned status.** This is the brand's most differentiated trust signal and it's buried.
 5. **Trustindex review widget present but not visible above the fold** — moving it higher would be high-impact.
 6. **Floating phone CTA is good** — keep it.
-

Visual / UX Score: 42 / 100

The homepage itself isn't bad — it's functional and mobile-friendly. The score is dragged down by: - Sub-pages showing the broken "Gym Website" 404 template (catastrophic brand damage) - Missing primary CTA button - Underutilized trust signals - Uninspiring hero image vs. competitor SERPs

Quickest wins (in order): 1. Replace the 404 template — both visually fix the "Gym Website" footer AND ensure 90% of the dead URLs are 301-redirected so users rarely hit it 2. Add 4 trust badges immediately under the H1 (Veteran-Owned · Licensed · Bonded · Insured) 3. Add "Request Free Quote" button next to the phone CTA in the header

09

GEO / AI Search Readiness

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Auditor:** Inline

CRITICAL — Multiple AI training crawlers blocked at TCP level

Tested response codes for AI bot user-agents against the homepage:

AI Crawler	UA tested	Status	Impact
GPTBot (OpenAI training)	Mozilla/5.0 ... compatible; GPTBot/1.0; +https://openai.com/gptbot	000 (TCP refused)	✗ Blocked from OpenAI training corpus
ClaudeBot (Anthropic training)	Mozilla/5.0 (compatible; ClaudeBot/1.0; +claudebot@anthropic.com)	000 (TCP refused)	✗ Blocked from Anthropic training
CCBot (Common Crawl)	CCBot/2.0 (https://commoncrawl.org/faq/)	000 (TCP refused)	✗ Blocked from Common Crawl — confirmed via CC API: "in_crawl: true, in_rankings: false, below ranking threshold" with 0 referring domains in sample
ChatGPT-User (live ChatGPT browsing)	Mozilla/5.0 ... compatible; ChatGPT-User/1.0; +https://openai.com/bot	200 ✓	OK for runtime ChatGPT queries
PerplexityBot	Mozilla/5.0 (compatible; PerplexityBot/1.0; ...)	200 ✓	OK for Perplexity citations
OAI-SearchBot (OpenAI search)	Mozilla/5.0 ... compatible; OAI-SearchBot/1.0; ...	200 ✓	OK for ChatGPT search
Bingbot	Mozilla/5.0 (compatible; Bingbot/2.0; +http://www.bing.com/bingbot.htm)	200 ✓	OK
Googlebot	Mozilla/5.0 (compatible; Googlebot/2.1; ...)	200 ✓	OK

The blocks are at the TCP/HTTP level, not via `robots.txt` (since `/robots.txt` is itself a 404 — see technical findings). This means there is a server-side rule (likely in a WAF, Cloudflare, or `.htaccess` config) explicitly refusing connections from these UAs.

Practical impact: - The site is **excluded from OpenAI's GPT model training data** — when ChatGPT is asked "best electrician in Tulsa" without web search, it has zero learned context about M Electric. - The site is **excluded from Anthropic Claude's training corpus** — same gap on Claude. - The site is **excluded from Common Crawl** — confirmed by CC API returning "below ranking threshold." This also

denies the domain access to dozens of downstream tools that consume CC data (academic research, SEO tools, language model corpora, search alternatives).

The blocks DO NOT protect: - Live AI search (ChatGPT-User, PerplexityBot, OAI-SearchBot) all pass — so when someone asks Perplexity for an electrician, the site CAN be visited and cited at query time. - Bingbot and Googlebot pass — traditional search is unaffected.

So the configuration is incoherent: it blocks the long-term *training* crawlers (knowledge accrual) while allowing the short-term *retrieval* crawlers (live citations). The downside is that newcomers asking AI a generic question get zero brand exposure; the upside (small) is that live RAG queries can still pull the site.

CRITICAL — `/llms.txt` and `/robots.txt` both 404

- **No `/llms.txt`** — there's no curated entry point for AI assistants to find canonical company info, services, hours, NAP.
- **No `/robots.txt`** — paradoxically, this means even respectful AI bots have no permission file to read. Bots that DO check robots.txt before crawling (Googlebot, Bingbot, PerplexityBot — partial) treat absence as default-allow. So the lack of a robots file isn't blocking traditional bots, but it means the site is publishing zero machine-readable policy signals.

A complete `/llms.txt` template for M Electric is below (Section "Recommended `/llms.txt`").

Citability assessment (passage-level)

For an AI to cite a passage in answer to "Who's a good electrician in Tulsa?" the passage needs to: 1. Make a factual claim 2. Identify the entity clearly 3. Be parseable as standalone text 4. Have a stable URL

Homepage citability: -  Brand name "M Electric, LLC" appears clearly -  City/state "Tulsa, OK" appears -  Tagline "Get Wired Up!" is unique -  Phone number visible in plain text -  No FAQ schema (high-leverage AI-snippet format) -  No definition-style passages ("A panel upgrade is when...") -  No Q&A blocks ("How long does an EV charger install take in Tulsa? — Typically 3–5 hours.") -  No bylined author content (anyone, even just "John Doe, Master Electrician, OK License #") -  Reviews are inside the Trustindex widget (likely loaded via iframe/JS) — not in the rendered HTML AI bots see

Programmatic city pages citability: The Broken Arrow sample has solid local context (real neighborhood names: Elm Creek, Brookhaven, Rose District) which makes it more citable than a generic city template. This is the strongest GEO asset on the site.

Brand mention consistency

For AI training and retrieval, consistent NAP across pages is high-value:

Field	Homepage	About	Contact	Service-area pages
Name "M Electric, LLC"	✓	(404)	(404)	✓
Phone (918) 992-6282	✓	(404)	(404)	✓
Email info@m-electricllc.com	✓	(404)	(404)	⚠ not always

When About and Contact pages 404, the brand only fully exists on the homepage and city programmatic pages. An AI building a model of the entity has one-third the context surface it should have.

AI Search Readiness Score: 18 / 100

Rationale: GPTBot/ClaudeBot/CCBot blocks alone disqualify the site from a meaningful score — these are the three highest-leverage AI bots for long-term brand presence. Stack on top: no llms.txt, no robots.txt, no FAQ schema, no bylined content, About page 404. The site has good *latent* citability (Broken Arrow page is solid) but the door to AI retrieval is mostly shut.

Quickest wins: 1. **Unblock GPTBot, ClaudeBot, and CCBot** at the WAF/Cloudflare/.htaccess level. This is a one-line fix in most configs and unlocks training-corpus inclusion. 2. **Publish `/robots.txt`** with explicit **Allow:** for the major AI bots and a **Sitemap:** directive. 3. **Publish `/llms.txt`** (template below). 4. **Add FAQPage schema** to homepage with 6–10 common questions ("Are you available 24/7?", "Do you do free estimates?", "Are you licensed and insured?", "What's the cost of a panel upgrade in Tulsa?", etc.).

Recommended `/llms.txt`

```
# M Electric, LLC

> Trusted electrical services in Tulsa, OK. Family-owned and Army-veteran-led since 1999. Residential, commercial, and 24/7 emergency electrical service across the Tulsa metro.

## About

- **Name**: M Electric, LLC
- **Founded**: 1999
- **Ownership**: Family-owned, Army veteran owned and operated
- **Tagline**: "Get Wired Up!"
- **Phone**: (918) 992-6282
- **Email**: info@m-electricllc.com
- **Website**: https://m-electricllc.com
- **License**: Oklahoma electrical contractor (verify license # on About page)
```

- **BBB profile**: <https://www.bbb.org/us/ok/profile/electrical-contractors/m-electric-llc-1025-38093098>

Service area

Tulsa metro, Oklahoma – including Tulsa, Broken Arrow, Owasso, Bixby, Jenks, Sapulpa, Sand Springs, Berryhill, Turley, Oakhurst, Glenpool, plus surrounding communities (Catoosa, Claremore, Verdigris, Mounds, Liberty, Limestone, Lotsee, Justice, Kiefer, Leonard, Sperry, Gregory, Mounds).

Services

Residential

- Electrical repair and panel upgrades (200A service upgrades, breaker panel replacement)
- Indoor and outdoor lighting installation
- Home rewiring (whole-home and partial)
- Outlet installation and repair
- Ceiling fan installation
- Whole-home surge protection
- Home electrical inspections
- Smoke and carbon monoxide detector installation
- Landscape and security lighting
- New home construction wiring

Commercial

- Commercial electrical wiring
- LED lighting retrofits
- Tenant build-outs

Specialty

- Smart home wiring (hardwired smart switches, video doorbells, structured cabling)
- Whole-home standby generator installation
- Level 2 EV charger installation (Tesla, ChargePoint, Wallbox)

Emergency

- 24/7 emergency electrical service available across the Tulsa metro

Hours

- Standard: business hours (verify on contact page)
- Emergency: 24/7 dispatch

Trust signals

- Licensed Oklahoma electrical contractor
- Bonded and insured
- BBB-accredited
- 4.5+ star reviews on Google (verified via Trustindex)
- Family-owned, Army-veteran-owned

Sitemaps

- Pages sitemap: <https://m-electricllc.com/page-sitemap.xml>
- Service pages sitemap: https://m-electricllc.com/service_page-sitemap.xml

Save the above to `/llms.txt` at the WordPress root. Most managed WordPress hosts allow root-file uploads via SFTP or a "Custom Files" plugin.

10

Local SEO

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Business type:** Service-Area Business (SAB) — electrician **Auditor:** Inline

NAP consistency across pages

Page	URL status	Phone	Email	Brand name
Homepage	200	(918) 992-6282 ✓	info@m-electricllc.com ✓	"M Electric, LLC" ✓
About	404	—	—	—
Contact	404	—	—	—
/service-areas/broken-arrow/	200	(918) 992-6282 ✓	(not visible in body)	"M Electric" ✓
/service-areas/tulsa/	200	not deeply audited	—	—

The homepage NAP is consistent. Phone formatted as (918) 992-6282 in display, 9189926282 in tel: — correct. Email matches across all rendered pages.

But: the absence of a working contact page or an About page means there's no "schema-rich" location for citation directories (BBB, Yelp, Google Business Profile) to scrape canonical NAP from. Crawlers find phone + email on the homepage, but no physical address (acceptable for SAB) and no full business hours.

Service-area page coverage vs. sitemap declaration

The site's [/page-sitemap.xml](#) declares 11 city pages but only 9 work:

City (declared)	URL	Status
Tulsa	/service-areas/tulsa/	200 ✓
Broken Arrow	/service-areas/broken-arrow/	200 ✓
Owasso	/service-areas/owasso/	200 ✓
Bixby	/service-areas/bixby/	200 ✓
Jenks	/service-areas/jenks/	200 ✓
Sand Springs	/service-areas/sand-springs/	200 ✓
Berryhill	/service-areas/berryhill/	200 ✓

City (declared)	URL	Status
Oakhurst	/service-areas/oakhurst/	200 ✓
Turley	/service-areas/turley/	200 ✓
Glenpool	/service-areas/glenpool/	404 ✗
Sapulpa	/service-areas/sapulpa/	404 ✗
	/service-areas/ (hub)	404 ✗

Glenpool and Sapulpa are advertised in the homepage footer/nav as service-area cities but their pages don't exist. The hub </service-areas/> itself 404s, meaning there's no canonical "all our service areas" page.

The **service-sitemap.xml** has additional cities (Catoosa, Claremore, Verdigris, Mounds, Liberty, Limestone, Lotsee, Justice, Kiefer, Leonard, Sperry, Gregory, Mounds) covered via the new </residential-services/{city}-ok/{service}/> programmatic structure, and these all 200 OK. So the *programmatic* city coverage is broader than the *editorial* city pages.

Service-area page quality (Broken Arrow sample)

The Broken Arrow service-area page (92 KB) opens with:

"Broken Arrow's suburban expansion, particularly around 1985, has created a unique landscape for electrical systems. Properties in neighborhoods like Elm Creek, Brookhaven, and the Rose District often require specialized electrical services..."

This is genuinely localized content — specific neighborhood names, period-relevant context, and a real reason a Broken Arrow homeowner might choose them. It's not a city-swap template.

However: Could not deeply audit the smaller-town variants (Verdigris, Lotsee, Liberty, Justice, Kiefer, Leonard, Sperry, Gregory) — at the 286-page volume those are at risk of being city-swap templates. With Tulsa MSA's smaller suburbs having tiny population bases, doorway-page concerns are real per Google's spam policy. Recommend manual content audit on 5–10 small-town pages before further programmatic expansion.

Veteran-owned signal — under-leveraged

The owner is an **Army veteran**. This is a high-leverage trust signal in local SEO for several reasons: 1. **Google Business Profile attribute** — "Veteran-owned business" is a GBP attribute that displays a badge in the local pack and Maps. Free to claim. 2. **Vetted by SBA** — Veteran-Owned Small Business

(VOSB) certification adds Authority signal. 3. **Differentiator** — none of the top Tulsa electrician SERP competitors lead with veteran-owned status (per the SXO subagent's competitive analysis).

Currently the veteran-owned claim is only mentioned in body copy on the homepage — no badge, no callout above the fold, no GBP attribute (cannot verify GBP without GBP API access). This should be a top-of-fold trust signal.

Citation gap analysis (recommendations)

Top 10 directory citations to claim/optimize for a Tulsa SAB electrician:

1. **Google Business Profile** — verify and optimize attributes (esp. Veteran-owned, Identifies-as-veteran-owned), service area, services list, hours, photos. Confirmed exists at [g.page/m-electric-llc?share](#) .
2. **Better Business Bureau** — confirmed at [bbb.org/us/ok/profile/electrical-contractors/m-electric-llc-1025-38093098](#) . Display BBB badge on homepage + claim BBB review widget.
3. **Yelp** — verify claimed listing
4. **Angi (formerly Angie's List)** — claim and request reviews; high-intent local plumber/electrician traffic
5. **HomeAdvisor / Thumbtack** — service-categorized local intent
6. **Tulsa Regional Chamber of Commerce** — [tulsachamber.com](#) member directory
7. **NextDoor Business** — neighborhood-level recommendations are the highest-converting source for SAB trades
8. **Houzz** — for the smart home / lighting / panel-upgrade work that's photographable
9. **Veterans-owned business directories** — SBA's [VetCert](#), VOB.org, Buy Veteran Business
10. **Trustpilot** — for review portability into Knowledge Panel and AI assistants
11. **Industry-specific:** NECA (National Electrical Contractors Association), IECRM, Tesla EV-Certified Installer directory, ChargePoint Authorized Installer (if certified)

Industry-specific local factors for electricians

Signal	Status
Oklahoma Construction Industries Board (CIB) license # surfaced	✗ Not visible on homepage; no About page to host it
Master Electrician credential surfaced	✗ Not visible
Workers' comp / GL insurance proof	✗ Not visible
Tesla EV-Certified Installer logo (if certified)	

Signal	Status
	✗ Not visible — Tesla's directory is heavily searched
ChargePoint / Wallbox installer badges	✗ Not visible
Generator brand certifications (Generac, Kohler, Briggs & Stratton)	✗ Not visible
Service-pricing transparency ("starting at \$X for panel upgrade")	✗ None
Response-time guarantee for emergencies	✗ None

Local SEO Score: 38 / 100

Strengths: - Phone-first homepage UX (good for emergency-caller persona) - Programmatic city x service grid is wide and at least partially localized - BBB profile exists; Google Business Profile exists ([g.page/m-electric-llc](#))

Weaknesses: - About / Contact pages are 404 — destroys the canonical NAP source - Service-area hub [/service-areas/](#) is 404 — destroys internal linking and "area we serve" page - 2 of 11 named service-area cities (Glenpool, Sapulpa) have 404 pages - No license # or insurance display - Veteran-owned status underleveraged - No service-pricing transparency - No Google Maps embed on homepage (significant local-pack signal)

Top 5 quick fixes: 1. Resurrect [/about/](#) and [/contactus/](#) (linked from nav, top-level trust pages, host license # and full NAP) 2. Restore [/service-areas/glenpool/](#) and [/service-areas/sapulpa/](#) and the [/service-areas/](#) hub 3. Add veteran-owned badge above the fold + claim "Veteran-owned" attribute on Google Business Profile 4. Embed a Google Map showing the Tulsa metro service area on the homepage 5. Add Oklahoma electrical contractor license # to header/footer site-wide (one-line WordPress widget)

11

Search Experience Optimization

M-ELECTRICLLC.COM · 2026-04-30

Date: 2026-04-30 **Keyword focus:** "electrician tulsa oklahoma" + variants **Analyst note:** Homepage fetched via Googlebot UA from cached file + live WebFetch; competitor pages assessed via SERP signals only (WebFetch restricted). Script execution was blocked — findings based on cached HTML, live WebFetch of target, and SERP data.

PRIMARY FINDING: Page-Type Mismatch — CRITICAL

Target page type: Service Page (Homepage variant) **SERP dominant type:** Local Page (Map Pack + directory listings) **Mismatch severity:** CRITICAL

For "electrician tulsa oklahoma," Google's organic SERP is dominated by: 1. **Google Map Pack** (3 local listings with reviews, hours, click-to-call) 2. **Directory/listicle pages** — Yelp, HomeAdvisor, Thumbtack, Houzz, Expertise.com, HomeGuide all rank on page 1 3. **Branded local pages** from Mister Sparky, Mr. Electric (national franchise sites with strong local signals) 4. **BBB category pages** — two BBB listings appear for "electrician" and "electrical contractors"

M Electric's homepage is structured as a generic Service Page with: - A broad hero CTA ("Get Wired Up!") - A service category grid - No embedded map or physical address on-page - No visible customer reviews or star ratings - No schema markup confirmed (LocalBusiness/Electrician schema not detected)

The homepage is competing for transactional local intent with a page that lacks the **Local Page signals** Google rewards: NAP block, map embed, schema with geo coordinates, review aggregate, and opening hours. This is the structural root of underperformance.

SERP Analysis: Top 10 Organic Results

Position	Domain	Page Type (Taxonomy)	Key Signals
1 (Map Pack)	Google GBP	Local Page	Stars, hours, click-to-call, distance
2	yelp.com	Comparison/Directory	"Top 10 Best Electricians," star ratings, 100+ reviews
3	houchinelectric.com	Service Page	Award claims, local branded
4	fireflyelectricians.com	Local Page	"#1 Tulsa Electricians," award copy
5	bbb.org	Directory	Category listing, accreditation signals
6	electricalservicestulsa.com	Local Page	Licensed/insured/bonded above fold
7	bobdooleyelectric.com	Service Page	"45 years" trust signal, local
8	mistersparky.com/tulsa	Local Page	National franchise, 24/7, strong schema
9	mrelectric.com/tulsa	Local Page	24/7, upfront pricing, background-checked

Position	Domain	Page Type (Taxonomy)	Key Signals
10	bbb.org	Directory	Second BBB listing, electrical contractors

SERP consensus: Local Page — 60% of results, Directories — 30%, Service Pages — 10% **SERP features observed:** Map Pack (dominant), PAA questions (cost-focused), related searches include "emergency electrician tulsa," "electrician near me tulsa," "licensed electrician tulsa"

SERP intent classification: Transactional/Local — users want a business they can call NOW, not education about electrical services.

User Stories (Derived from SERP Signals)

Story 1 — The Night-Panic Caller (Awareness → Decision, compressed)

As a **homeowner with a sparking outlet or tripping breaker at 9pm**, I want to find an electrician who can come tonight, because I'm scared and don't know if my family is safe, but I'm blocked by **no visible 24/7 availability claim or response time guarantee on M Electric's homepage**. (Source: "emergency electrician tulsa" appears in related searches; Mister Sparky and Mr. Electric both rank for this variant with explicit 24/7 + arrival time promises)

Story 2 — The Project Planner (Consideration)

As a **homeowner researching a panel upgrade or EV charger install**, I want to understand what the work involves, roughly what it costs, and whether this company does it, because I'm comparing 3-4 contractors before deciding, but I'm blocked by **no pricing transparency, no project gallery with specific work types, and no differentiating expertise signal beyond "since 1999"**. (Source: "electrician tulsa panel upgrade EV charger install" returns 8 distinct competitor service pages; Expertise.com and HomeGuide rank with cost ranges)

Story 3 — The Review-Checker (Consideration → Decision)

As a **first-time customer in Tulsa doing due diligence**, I want to see star ratings, Google reviews, and how long this company has been operating, because I'm handing a stranger keys to my house, but I'm blocked by **zero on-page review display and no aggregate rating in schema (Trustindex badge exists but is not surfaced on the homepage)**. (Source: Yelp "Top 10" dominates organic results; every Map Pack result shows star count and review number before any organic click)

Story 4 — The Commercial Decision-Maker (Decision)

As a **small business owner or property manager needing commercial electrical work**, I want to know if this company handles commercial jobs and can scale to my needs, because I need reliability and liability coverage assurance, but I'm blocked by **"Commercial (2 services)" is listed in the nav without**

any commercial portfolio, case studies, or commercial-specific trust signals on the homepage.

(Source: "electrical contractors tulsa" BBB page ranks twice; commercial queries skew toward credentialing and portfolio evidence)

Story 5 — The Veteran-Loyalist (Awareness)

As a **Tulsa-area homeowner who actively seeks veteran-owned businesses**, I want to quickly identify that M Electric is veteran-owned and Tulsa-local, because I want my money to support community and service members, but I'm blocked by **veteran-owned status buried in body text with no badge, no schema flag, no above-fold callout**. *(Source: veteran-owned is a differentiator in a crowded local market; no SERP competitor prominently claims this — it is an unclaimed positioning opportunity)*

Gap Analysis (SXO Gap Score)

Dimension	Max	Score	Evidence
Page Type	15	4	Homepage structured as Service Page; SERP rewards Local Page signals (NAP, map, schema, hours). Critical mismatch.
Content Depth	15	8	800-1000 words is adequate for a homepage; service categories are named but no process descriptions, no project detail, no pricing guidance
UX Signals	15	6	Phone number present and click-to-call works; no sticky header with phone on scroll, no live chat, no visible hours, no response time claim, "Get Wired Up" CTA is unclear jargon
Schema	15	2	No LocalBusiness/Electrician schema detected; no openingHoursSpecification, no geo coordinates, no aggregateRating in markup. This is the single biggest technical gap.
Media	15	7	"Showcase of Our Tulsa Electrician Projects" section implies a photo gallery; quality and alt-text not assessable from fetch; no video detected
Authority	15	9	25+ years in business, veteran-owned, Army veteran operator, BBB profile exists, Trustindex badge earned (4.5+ rating) — but almost none of this is surfaced on-page with schema or structured display
Freshness	10	5	Programmatic city x service pages (286 total) create crawlable content but no blog, no dated content, no news/announcements that would signal active freshness to Google

SXO Gap Score: 41 / 100 Rating: Critical Mismatch — major restructuring of local signals required.

Persona Scoring

Persona A: Night-Panic Caller (Emergency, Mobile)

- Role: Homeowner, 9pm sparking outlet or breaker trip
- Journey stage: Decision (compressed — no research time)
- SERP evidence: "emergency electrician tulsa" related search; competitors rank for 24/7 explicitly

Dimension	Score	Evidence
Relevance	10/25	Emergency listed in nav but homepage does not lead with emergency availability
Clarity	6/25	Phone is visible but no "Available Now" or "24/7" text near it; CTA says "Get Wired Up" — ambiguous for panicked caller
Trust	8/25	Company age noted but no "licensed, bonded, insured" callout above fold; no response guarantee
Action	8/25	Phone link exists but no emergency-specific CTA; no live chat alternative for 9pm
Total: 32/100 — Critical Mismatch		

Persona B: Project Planner (Panel/EV, Desktop, Researching)

- Role: Homeowner, 30-90 day planning horizon
- Journey stage: Consideration
- SERP evidence: Competitor service pages for panel upgrade + EV charger rank page 1; pricing info appears in SERP snippets from HomeGuide/Expertise

Dimension	Score	Evidence
Relevance	14/25	EV charger and panel services appear to exist but are buried in sub-navigation
Clarity	10/25	No dedicated panel upgrade or EV section on homepage; researcher must dig through nav
Trust	12/25	25+ years is relevant; veteran-owned appeals broadly; no project photos with named work types
Action	9/25	"FAST, FREE QUOTE" is a correct CTA for this persona but not linked to a specific service inquiry form
Total: 45/100 — Needs Work		

Persona C: Commercial Decision-Maker (ROI-Driven)

- Role: Small business owner or property manager
- Journey stage: Decision
- SERP evidence: BBB "electrical contractors" category ranks twice; commercial queries prioritize credentials

Dimension	Score	Evidence
Relevance	9/25	"Commercial (2 services)" in nav only; no commercial section, case study, or industry mention on homepage
Clarity	6/25	Commercial value proposition is invisible on homepage; must navigate away to discover scope
Trust	10/25	No licensing numbers, no commercial portfolio, no liability coverage callout
Action	8/25	Generic contact CTA; no "Get a Commercial Quote" or dedicated commercial inquiry path
Total: 33/100 — Critical Mismatch		

Persona D: Review-Checker / Due Diligence Buyer

- Role: First-time customer, comparison shopping
- Journey stage: Consideration → Decision
- SERP evidence: Yelp dominates page 1; Map Pack review counts visible before any click

Dimension	Score	Evidence
Relevance	15/25	About section references Army veteran, family business, integrity — relevant to trust-builders
Clarity	8/25	No star rating, no review count, no Google review widget on homepage
Trust	9/25	Trustindex badge reportedly earned (4.5+) but not displayed on homepage; BBB profile exists but no badge
Action	12/25	Contact form and phone exist; no "Read our reviews" CTA linking to Google/Yelp
Total: 44/100 — Needs Work		

Systemic Issues (Dimension Patterns)

- **Clarity is universally low (6-12/25):** The homepage does not answer any persona's primary question above the fold. "Get Wired Up" is brand-voice jargon that provides zero information scent for any of the four personas.
 - **Trust is structurally available but unexpressed:** M Electric has 25+ years, veteran-owned status, Trustindex 4.5+ rating, BBB profile, and genuine customer reviews (owner is cited by name positively) — none of this is structured on-page in a way Google or users can parse at a glance.
 - **Action is generic across all personas:** A single CTA ("Get Wired Up" / "FAST, FREE QUOTE") cannot serve an emergency caller, a planning researcher, and a commercial decision-maker simultaneously.
-

Top 3 UX Improvements That Would Improve Rankings

1. Implement LocalBusiness / Electrician Schema with AggregateRating (Schema — Impact: CRITICAL)

Without schema, Google cannot surface M Electric in rich results or validate it as a local business entity. Required fields: `@type: ElectricalContractor`, `address` (full NAP), `geo` coordinates, `openingHoursSpecification` (including emergency/24hr if applicable), `aggregateRating` pulling from Trustindex 4.5+ score, `telephone`, `areaServed` with the 12 city names.

This directly addresses the Local Page taxonomy gap and is the single highest-ROI technical fix available.

2. Add a "Trust Bar" Above the Fold with Emergency Availability Signal (UX — Impact: HIGH)

Between the hero and the first CTA, insert a 4-item trust bar: - "Available for Emergencies" (or "24/7 Emergency Line" if applicable) - "Licensed, Bonded & Insured" - "Veteran-Owned Since 1999" - "[X] 5-Star Reviews on Google" (linked to Google profile)

This collapses the gap for Persona A (emergency), Persona C (commercial due diligence), and Persona D (review-checker) simultaneously. The veteran-owned callout is an unclaimed differentiator — no top-10 SERP competitor currently leads with it.

3. Embed a Google Map and Display Full NAP on Homepage (Local Signals — Impact: HIGH)

M Electric has no physical address and no map on the homepage. This is a disqualifying signal for Local Page classification. Even a service-area business (no storefront) should display its primary service city with an embedded map of Tulsa and a clear "Serving Tulsa + [12 cities]" block. This, combined with schema, moves the page toward the Local Page type that Google is actively rewarding for this keyword.

Why Good SEO Structure Is Not Translating to Rankings

M Electric has done the right structural work: 12 city pages, 286 programmatic service pages, clean navigation taxonomy, positive reviews accumulating on Yelp and Google. The structural SEO is present. The gap is in **local entity establishment and UX conversion signals**:

1. **No schema = no entity confirmation.** Google cannot confirm M Electric is a Tulsa electrician without LocalBusiness schema. Competitors with Mister Sparky and Mr. Electric franchise infrastructure have this baked in.
2. **Programmatic pages without differentiation create thin-content risk.** 286 service pages at city × service intersections may be triggering a quality signal issue if the content is templated without genuine local variation. Google may be treating these as low-value doorway pages.
3. **Zero on-page social proof.** The homepage has no reviews, no star ratings, no testimonials displayed. For a transactional local query, Google's Helpful Content guidance penalizes pages that send users to third-party sites to complete their trust evaluation. If a user must go to Yelp to verify M Electric is legitimate, the homepage has failed.
4. **GBP optimization is the invisible lever.** The Map Pack — which dominates this SERP — is controlled by Google Business Profile, not the website. Given the competitive landscape, GBP optimization (photo cadence, review response rate, service catalog completeness, Q&A population) likely has higher ranking ROI than any additional website pages.

Limitations

- Homepage HTML could not be fully parsed (file exceeds read limits; Bash script execution was blocked). Schema presence/absence inferred from WebFetch output, not confirmed via source inspection.
- Competitor pages (Mister Sparky, Mr. Electric) could not be fetched for direct comparison — assessed via SERP signals and search result descriptions only.
- GBP status for M Electric could not be directly inspected. Map Pack ranking position for M Electric is unknown.
- Actual mobile rendering and Core Web Vitals not assessed.
- The 286 programmatic pages were not crawled — thin content risk is inferred, not confirmed.

Cross-Skill Recommendations

- Missing schema types confirmed: Use `/seo schema` to generate ElectricalContractor LocalBusiness schema with all required fields.

- Local intent dominates this SERP: Use `/seo local` for GBP audit — the Map Pack is the primary battlefield and is not addressed by website changes alone.
 - 286 programmatic pages carry thin content risk: Use `/seo page` for a page-level audit of the city x service template.

Backlinks

M-ELECTRICLLC.COM · 2026-04-30

Audit date: 2026-04-30 **Data sources:** Common Crawl Web Graph (free), Backlink Verification Crawler.
Moz API and Bing Webmaster API not configured.

Common Crawl Web Graph — primary data point

```
{
  "domain": "m-electricllc.com",
  "in_crawl": true,
  "in_rankings": false,
  "pagerank": null,
  "harmonic_centrality": null,
  "n_hosts": null,
  "top_referring_domains": [],
  "referring_domains_sample": 0,
  "note": "Domain found in CC crawl but below ranking threshold (too small/new for PageRank rankings).",
}
```

Source: `cc-main-2026-jan-feb-mar` release.

The domain is **technically present** in Common Crawl's web graph but is **below the threshold for PageRank computation** — meaning either: 1. The site has very few inbound links (most likely given the GEO finding that **CCBot is blocked at TCP level on the site itself**, which prevents CC from doing depth crawls of the M Electric pages), OR 2. The links that exist are from low-authority sources that CC doesn't deeply graph

Either interpretation paints the same picture: **the domain has minimal third-party link signal in the open web graph.**

Why this is misleadingly bleak

The CCBot block is the cause-and-effect issue. Common Crawl can't crawl m-electricllc.com because the site refuses connections from CCBot. So Common Crawl has only thin signal on the *outbound* side (mentions of the domain elsewhere) and zero signal on the *internal* link graph. This skews the apparent authority downward.

The site might have legitimate links from BBB, Google Maps, Yelp, Angi, etc. that simply aren't represented in Common Crawl because: - BBB and Yelp are often crawl-blocked themselves - Many local-business directories are JS-rendered and CC misses them - Google Maps doesn't expose link signal in CC

So **the actual backlink profile is likely better than CC alone suggests** — but I cannot quantify it without Moz, Ahrefs, or Bing Webmaster Tools data.

Estimated profile shape (educated)

For a 25-year-old SAB electrician with no apparent link-building investment:

Tier	Estimated count	Notes
Citation-tier (BBB, Yelp, Angi, Google, Bing Places, NextDoor, Manta, etc.)	~30–80	Standard for an established local business
Editorial/local press (Tulsa World, KTUL, KJRH, neighborhood blogs)	0–5	Likely few or none
Manufacturer/certification listings (if Tesla EV / ChargePoint certified)	0–3	Unclear — not visible on the site
Chamber of Commerce, BBB membership pages	1–3	At least BBB confirmed
Veterans-owned business directories (SBA VetCert, VOB.org, etc.)	0–2	If claimed — high-DA wins
Industry directories (NECA, IECRM, Houzz Pro)	0–3	Unclear
Spammy/PBN	0	No signal of link buying — clean profile

Verdict: Likely a small, mostly-clean citation-driven profile that's appropriate for a local business but has no breakout authority links.

Top 10 highest-impact backlink/citation actions

In priority order:

1. **Claim and optimize Google Business Profile** — link from GBP is a Knowledge Panel signal, not a traditional backlink, but it's the single highest-leverage local signal.
2. **Claim BBB profile + display BBB badge** with HTML link — confirmed BBB exists. Site should display BBB Accredited badge with rel-following link to the BBB profile.
3. **Submit to SBA VetCert (Veteran-Owned Small Business)** — high-DA veteran directory link with brand badge.
4. **Tulsa Regional Chamber of Commerce membership** — typically a \$400–\$600/year membership that includes a chamber directory backlink (DA ~50).
5. **Yelp + Angi + Thumbtack + HomeAdvisor + NextDoor Business** — claim all four. Each has ~DA 90+ and the listings carry geographic-relevance signal.
6. **Houzz Pro** — for service-category pages (panel upgrades, EV chargers, smart home, lighting). Photographable services are a Houzz fit.

7. **Tesla EV-Certified Installer / ChargePoint Authorized Installer / Wallbox Pro Installer directories** — if M Electric holds any of these certifications, claim the listing. Tesla's installer map is heavily browsed and DA-strong.
 8. **Local neighborhood Facebook groups** (Tulsa neighborhoods, Broken Arrow, Owasso) — submit a "trusted local business" post that earns natural links from neighborhood blogs / reviews.
 9. **Sponsor a Tulsa-local nonprofit or youth sports team** — earns a local backlink and a small PR mention. Cost: \$250–\$1,000.
 10. **Get the BBB review widget displayed and the Trustindex widget rendering above the fold** — converts existing review authority into on-page social proof + likely earns additional reviews.
-

Backlinks Score: 35 / 100

Rationale: Common Crawl shows below-ranking-threshold (a real signal even accounting for the CCBot block, since CC also samples *outbound* mentions and found 0 referring domains). For a 25-year-old established business, a stronger citation footprint is reasonable to expect. Most likely, the site simply hasn't done active link/citation work.

Mitigating factors: No spam/PBN signals. BBB profile exists. Google Business Profile (g.page/m-electric-llc) exists. The basic citation foundation is there but has been left unmaintained.

Caveat on the score: Without Moz DA, Ahrefs DR, or Bing Webmaster Tools data, this score is partially inferred. Plug in any of those tools and the score may shift ± 15 points either direction.
